EDUCATION

National Institute of Technology Karnataka

Bachelor of Technology in Mechanical Engineering

Mangaluru, India

Nov. 2022 – May 2026

EXPERIENCE

OnQuest – Lead Developer | Onquest.in

March 2025 –

React, Next.js, Backend services(Firebase), Google Maps API, Gemini API, GCP, LLM integration, system design

- Built AI-powered travel planning workflows using Gemini APIs to generate personalized itineraries
- Developed the core AI Trip Planner by integrating Gemini API with Google Maps and backend services, enabling end-to-end generation of personalized travel “Quests” with real-time recommendations and route-aware planning.
- Led development for dynamic travel-planning interfaces and conversational UI components using React, Next.js, and Firebase, delivering scalable user experiences across multiple core platform modules.
- Engineered OnQuest’s social platform features including Quest Feed, user interactions, and recommendation systems, contributing to full-stack architecture, API integration, and production deployment of user-facing features.

PROJECTS

ProductSense AI | Readme.md | Browser extension (Next.js, TypeScript, PostgreSQL, OpenAI, Plasmio)

- Built an AI-powered browser extension that analyzes products across major e-commerce platforms and generates Buy Scores, Regret Probability, and alternative recommendations in real time.
- Engineered a full-stack evaluation pipeline using Next.js APIs, PostgreSQL, and multi-agent LLM workflows to combine product metadata, review credibility checks, pricing signals, and community sentiment into actionable purchase recommendations..

Non-Invasive Glucose Detection system | Readme.md | Live Demo | ESP32, React, WebSockets, Signal Processing

- Developed a biosensing prototype integrating sensors, analog signal acquisition, and ESP32-based data collection to capture low-amplitude physiological signals under noisy real-world conditions.
- Built a real-time monitoring platform with WebSockets and React dashboards, implementing filtering and trend-analysis algorithms to convert noisy biological signals into continuous health insights with 100ms updates.

Smart Resume Analyser | Live Demo | React Router v7, Vite, Tailwind, Zustand

June 2025 – Present

- Developed an intelligent resume evaluation platform that extracts candidate attributes and applies structured scoring models to assess skills, experience, and profile strength across multiple dimensions.
- Implemented explainable feedback generation and standardized assessment workflows, enabling consistent candidate evaluation and actionable improvement recommendations.

Business Insights Engine | Github | E-commerce Analytics Pipeline (Python, Pandas, MySQL, Power BI)

- Built an end-to-end analytics pipeline processing 100K+ e-commerce records using Pandas, MySQL, and Power BI to generate business intelligence dashboards for revenue, customer behavior, and retention analysis.
- Designed optimized relational schemas and advanced SQL analyses using CTEs and window functions, enabling actionable insights through data cleaning, aggregation, KPI tracking, and performance reporting.

TECHNICAL SKILLS

Languages: C++, SQL, Python, JavaScript/TypeScript

Frameworks: React.js, Next.js, Node.js, Express.js

Data Analytics: SQL, Data Analysis, Excel, Power BI, Dashboarding, Python (Pandas)

Databases: MySQL, MongoDB, Firebase, Redis

Developer Tools: Git, Github, Docker, GCP,

System Design: High-Level Design, Low-Level Design, REST APIs,)

ACHIEVEMENTS

1. **Flying and Robotics Club:** Designed and simulated UAV prototypes as part of the Flying Robotics Club (Avionics), advancing to Round 2 of IIT Bombay’s SAE Innovation Challenge 2024 among top national teams.
2. **DSA Leetcode:** 300 solved with c++
3. **Mercahnt Navy:** Qualified selection process (aptitude, problem solving, communication)
